Bitfury and Waverley Join Forces to Design New Blockchain Solutions

New Partnership Will Bring Innovative Blockchain Apps to Clients

PALO ALTO – September 12, 2018 – The Bitfury Group and Waverley Software today announced a strategic partnership to develop blockchain applications for clients.

Bitfury, the world's leading full-service blockchain technology company, and Waverley, a renowned full-cycle Silicon Valley-based custom software development firm, will collaborate to deliver unique encryption software, GDPR-compliant blockchain-based systems and blockchain applications to businesses and organizations globally.

The partners will help clients benefit from safe data access management by means of customizing and integrating the Exonum, Crystal and Lightning Peach frameworks developed by Bitfury. It will enable organizations to simplify and secure some of their sensitive operations (like maintaining government registers, protecting and verifying medical records, managing retail supply chains and easily conducting finance audits) while saving the time and expenses that would be caused by developing solutions from scratch.

"With their robust portfolio of technology products, Waverley now becomes our integration partner in the United States and Europe, helping to drive forward the integration of our blockchain products," said Valery Vavilov, CEO of Bitfury. "Combined with our expertise and experience, the partnership enables new, more powerful solutions, like highly accurate blockchain data investigation tools and innovative blockchain-based GDPR-compliant systems."

"Waverley is excited to join forces with Bitfury, a powerful international blockchain provider, to faster and more efficiently address the needs of organizations such as data decentralization, ensuring data authenticity and immutability, clear and transparent transactions, data protection from falsification and other ways to store and protect sensitive data in low-trust environments," said Matt Brown, president and CEO of Waverley Software.

About The Bitfury Group

The Bitfury Group is the world's leading full-service blockchain technology company. Bitfury is building solutions for the future, with the most significant technologies of the millennium. Our mission is to make the world more transparent and trusted by innovating at every level of technology – hardware, security, and software – to put trust back into the equation. Founded in 2011, Bitfury is the leading security and infrastructure provider for the Bitcoin Blockchain. In addition to securing the Bitcoin Blockchain, Bitfury also designs and produces innovative hardware that keeps cryptocurrencies and blockchains secure, including custom semiconductor chips and mobile datacenters. Bitfury is also a software provider for the some of the world's most cutting-edge applications through its private blockchain framework, Exonum, its advanced analytics platform Crystal Blockchain, and its specialized engineering

team for the open-source Lightning Network, LightningPeach. To learn more, visit
